Full Stack Software Engineer — Backend & Platform Systems

PROFESSIONAL SUMMARY

Software engineer experienced in building scalable multi-tenant platforms, backend APIs, and containerized microservice systems. Skilled in system orchestration, secure multi-user architecture, and production deployment using React, Django, Docker, and AWS.

WORK EXPERIENCE

- Edubricz Technologies** Onsite
Full Stack Developer Intern (Full-Time) Aug 2025 – Present
 - Architected **HOST**, a production-grade multi-tenant PaaS deploying isolated WordPress and full-stack applications using Docker-based orchestration.
 - Designed containerized microservice workflows enabling tenant isolation, automated provisioning, and scalable service deployment.
 - Reduced deployment time by **58% (120s → 50s)** and teardown time by **50% (70s → 35s)** through optimized container lifecycle handling.
 - Implemented load-balanced backend routing using centralized Nginx gateway configurations across replicated services.
 - Built automated encrypted backup pipelines using AWS S3 with retention scheduling and failover support using AWS RDS.
 - Developed RBAC-enabled multi-user dashboards with real-time resource monitoring and secure authentication workflows.
- Freelance Web Developer** Remote
Frontend Developer (Contract) 2024
 - Delivered **6 production-ready React applications**, managing full lifecycle from requirements to deployment.
 - Built responsive UI systems integrated with backend APIs, ensuring optimized performance across devices.

PROJECTS

- RecruiterRisk AI Recruiter Trust Platform** Developed a microservice-oriented MERN platform to detect fraudulent job postings using external verification APIs and trust-scoring workflows. Implemented JWT authentication, RBAC access control, and analytics dashboards to evaluate recruiter credibility in real time. Designed scalable REST APIs and structured backend logic to support secure data validation and risk scoring operations.
- Soft Tissue Tumor Diagnosis GM-UNet** Built deep learning pipelines for MRI-based tumor segmentation including preprocessing, model training, and evaluation workflows. Implemented Dice and IoU evaluation metrics to validate model performance and monitor training convergence. Achieved **87% validation accuracy** with stable loss reduction using TensorFlow-based neural network architecture.

TECHNICAL SKILLS

Core Stack: React, TypeScript, Django, Node.js, Express, REST APIs
Cloud & DevOps: AWS, Docker, CI/CD, Terraform, Linux, Git, GitHub Actions
Databases: MongoDB, MySQL, PostgreSQL, Redis
Languages: Python, Java, JavaScript, C, SQL
AI / ML: TensorFlow, PyTorch, Scikit-learn, NumPy, Pandas

ACHIEVEMENTS

Pine Labs Hackathon (AWS) Built PayStream, an automated payment-trigger platform using FastAPI and rule-driven workflows.

EDUCATION

PES Institute of Technology and Management
B.E. Computer Science and Engineering

Shivamogga
2022 – 2026
