Profile

Computer Science Engineering student (2026) with strong foundations in **Python, SQL, and Machine Learning**. Hands-on experience building deep learning models on real-world medical imaging datasets. Experienced in full-stack development and familiar with **Generative AI concepts**, with a focus on ethical, interpretable, and scalable AI systems.

Technical Skills

Programming: Python, SQL, JavaScript, C, Java

Machine Learning & AI: Linear Regression, Decision Trees, Random Forests, Neural Networks, Medical Image Segmentation, Multi-task Learning, Model Evaluation

Deep Learning & Libraries: TensorFlow/Keras, Scikit-learn, OpenCV, NumPy, Pandas, Matplotlib, Seaborn

AI & Generative AI: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering, AI Ethics

GenAI Tooling: LangChain.js, Vector Databases, Embedding-based Retrieval

Full Stack: React.js, Node.js, Express.js, MongoDB (MERN), REST APIs

Tools & Platforms: Git, Docker, Flask, AWS (fundamentals)

Projects

Deep Learning-Based Soft Tissue Tumor Detection using GM-UNet (Research Project) *Python, TensorFlow*

- Designed a hybrid **GM-UNet** architecture integrating U-Net, GAN-based adversarial training, and **Visual Mamba attention** for accurate soft tissue tumor segmentation.
- Built a **multi-task pipeline** combining tumor segmentation and benign/malignant classification using an EfficientNet-based architecture.
- Preprocessed and augmented MRI datasets; evaluated performance using **Dice Score, IoU, accuracy, sensitivity, and precision**.
- Deployed the trained model as a **clinical decision-support web application** using Flask/Django, enabling real-time MRI upload, segmentation visualization, and diagnosis.

Publication: International Journal of Scientific Research in Engineering and Management (IJSREM), Vol. 9, Issue 11, Nov 2025

RecruiterRisk – AI-Powered Recruiter Trust Verification Platform *Python, MERN Stack*

- Developed a data-driven platform to identify fraudulent recruiters and suspicious job postings.
- Implemented scoring logic in Python and integrated third-party APIs for recruiter credibility analysis.
- Built full-stack features using **React, Node.js, Express, and MongoDB**.

Global Terminal Calculator *Java, Docker*

- Developed a containerized Java-based CLI application for cross-platform execution.
- Gained hands-on exposure to Docker-based packaging and deployment workflows.

Education

PES Institute of Technology and Management, Shivamogga

B.E. in Computer Science and Engineering

2022 – 2026

CGPA: **8.29**

Relevant Coursework: Statistics, Machine Learning, Artificial Intelligence, DBMS, Data Structures

Certifications

- Introduction to Relational Databases (SQL) – IBM
- AI & Machine Learning Fundamentals – Infosys Springboard
- AWS Academy Cloud Foundations – AWS
- Software Engineering Essentials – Coursera
