Full Stack Developer — AI & Cloud Enthusiast

PROFESSIONAL SUMMARY

Full stack developer and AI practitioner experienced in building and deploying scalable web and machine learning applications. Strong in MERN stack, containerization, CI/CD automation, and cloud-native deployments. Focused on production-ready architecture, reproducible pipelines, and measurable model performance.

PROJECTS

- **RecruiterRisk — AI-Powered Recruiter Trust Verification Platform**
Built and deployed an AI-driven recruiter verification platform (MERN) to detect fraudulent job postings and improve hiring transparency.
Implemented RBAC with JWT authentication and admin analytics dashboards (Chart.js).
Integrated Clearbit, Hunter.io and Google Safe Browsing for credibility scoring and automation.
Deployed backend on **Render** and frontend on **Vercel** with CI/CD automation.
Stack: React, Node.js, Express, MongoDB, JWT, APIs, Render, Vercel
- **Soft Tissue Tumor Diagnosis Using GM-UNet (Ongoing)**
Designed end-to-end ML pipelines (preprocessing, model tuning, evaluation) for MRI-based tumor segmentation; evaluated with **Dice** and **IoU**.
Trained a GM-UNet model achieving **87% validation accuracy** in 10 epochs while maintaining aligned training/validation curves to avoid overfitting.
Focused on data preprocessing, hyperparameter tuning, and stable loss convergence to improve generalization.
Tech: Python, TensorFlow, NumPy, Pandas
- **TaskZen — Project Management Platform**
Built a MERN-based collaboration tool for project/task management. Developed RESTful APIs for task CRUD, assignments, and calendar sync; implemented authentication and responsive UI with Tailwind CSS.
Stack: React, Node.js, Express, MongoDB, Tailwind CSS
- **Global Terminal Calculator**
Developed a Java-based CLI calculator containerized via a multi-stage Docker build (JDK → JRE) for cross-platform global execution without local Java.
Automated CI/CD with GitHub Actions to build and push images to Docker Hub ([adarsha5389/terminal-calci](https://github.com/adarsha5389/terminal-calci)).
Implemented .dockerignore and image optimizations to reduce final image size and improve build speed.
Stack: Java 25 (Temurin), Docker, GitHub Actions

TECHNICAL SKILLS

Languages: Python, Java, C, JavaScript, TypeScript, SQL
Frameworks & Web Technologies: React, Node.js, Express, Django, REST API
Database: MongoDB, MySQL
AI / ML: TensorFlow, PyTorch, Scikit-learn, NumPy, Pandas, Data Preprocessing, Model Optimization
DevOps / Cloud: Docker, CI/CD, Terraform, AWS, Linux, Shell Scripting, Git, Networking, GitHub Actions
Tools: GitHub, Postman, Jira, Heroku, Vercel

EDUCATION

PES Institute of Technology and Management
B.E. in Computer Science and Engineering **CGPA: 8.5**

Shivamogga, Karnataka
2022 – 2026

CERTIFICATIONS

AWS Cloud Solution Architect	AWS
Introduction to Relational Databases	IBM
Software Engineering Essentials	Coursera
AI & Machine Learning Fundamentals	Infosys Springboard
