Software Engineer — Full Stack Development — Backend Systems

PROFESSIONAL SUMMARY

Software engineer with experience building scalable product-focused web applications and backend systems using React, Django, PostgreSQL, Docker, and AWS. Skilled in backend development, API design, deployment workflows, authentication systems, and production debugging across full stack applications.

WORK EXPERIENCE

- Edubricz Technologies** Onsite
Full Stack Developer Intern January 2026 – Present
 - HOST Platform:** Built dashboard modules and lifecycle management features using React and Django REST APIs with component-based architecture and reusable frontend systems.
 - Designed and implemented REST APIs and backend workflows supporting authentication, RBAC, multi-tenant architecture, and scalable resource allocation.
 - Collaborated with product and engineering teams to convert requirements into scalable product features and iterative improvements.
 - Owned deployment, testing, and debugging workflows across AWS environments to improve release reliability and production stability.
 - Built Docker-based infrastructure modules supporting deployment and management of isolated WordPress and full stack application environments.
 - Reduced deployment overhead through container lifecycle automation improvements.
 - Built encrypted AWS S3 backup workflows with retention scheduling and AWS RDS failover support.
- Sales Tracking System** Live
Developed a full stack sales management platform using React, PHP, MySQL, and AWS for education sector field teams.
 - Built Google Maps integrations, backend APIs, authentication systems, and reporting workflows supporting route planning and visit tracking.
 - Deployed the platform on AWS EC2 and AWS RDS supporting operational workflows for 8 sales users and 3 administrators across 50+ educational institutions.

PROJECTS

- RecruiterRisk – AI Based Recruiter Verification Platform** Live — GitHub
Developed a full stack web application using MongoDB, Express, React, and Node.js to identify fraudulent job postings. Implemented JWT authentication, role-based access control, recruiter dashboards, and backend APIs for trust scoring and risk analysis.
- Soft Tissue Tumor Diagnosis using GM-UNet** Publication
Developed MRI tumor segmentation pipelines including preprocessing, training and evaluation workflows. Implemented Dice and IoU metrics achieving 87% validation accuracy using TensorFlow-based deep learning models.

TECHNICAL SKILLS

Languages:	Python, Java, JavaScript, PHP, SQL, C
Frameworks:	React, Django, Django REST Framework, Express.js, Node.js
Backend:	REST APIs, Authentication, RBAC, OAuth, API Design
Databases:	PostgreSQL, MongoDB, MySQL
Cloud and DevOps:	AWS EC2, AWS S3, AWS RDS, Docker, CI/CD, Linux, Git
Frontend:	Responsive Design, Component Architecture, State Management
Other Tools:	Supabase

EDUCATION

- PES Institute of Technology and Management** Shivamogga, Karnataka
B.E. in Computer Science and Engineering 2022 – 2026
